

This Is No Time To
Doubt Your Security

BRAVOTM
PIR Motion
Detectors

Accuracy That's Been Proven All Over The World

DSC[®]

Accurate Detection

Because no security system can outperform the detector that alerts it, you need Bravo PIR Motion Detectors for complete peace of mind. Bravo's astounding accuracy is the direct result of unique multi-level signal processing that analyses each movement - adjusts automatically for "fast/slow" and "near/distant" motion - and responds within a fraction of a second.

False Alarm Immunity

Bravo works just as precisely to prevent false alarms as it does to catch an intruder. With stronger light filters, unique multi-level signal processing and carefully positioned transient/static suppressors, Bravo assures outstanding protection against all false alarm sources... lightning, power surges, static, radio interference, car headlights, fluorescent lights, insects and dust.

Reliable Performance

Regardless of temperature fluctuation - which tends to swell or shrink a detector's sensitivity - Bravo ensures seamless security from 32°F (0°C) to 122°F (50°C). Automatic temperature compensation maintains maximum catch... without any increase in risk of false alarms.

Proven Worldwide

Because of its incomparable reputation for accuracy, immunity and reliability, Bravo has rapidly become one of the most widely used motion detectors in the world. It has proven itself in all types of environments - private homes, office buildings, commercial, institutional and industrial complexes - and under all climatic conditions.

Three Models to Meet Precise Needs

Bravo 2 Standard-Range PIR is ideal for residential security systems and all normal office & commercial installations.

Bravo 3 Long-Range PIR is recommended for larger residential, commercial & industrial installations that require extended range sensing without any compromise in accuracy.

Bravo Quad PIR is specifically designed for commercial, institutional & industrial environments that experience abnormally severe or volatile conditions.

Selection Chart	Bravo 2	Bravo 3	Bravo Quad
With Form "A" Alarm Contact	BV-200	BV-300	BV-400
With Form "A" Alarm Contact & Tamper Switch	BV-201	BV-301	BV-401
With Form "C" Alarm Contact & Tamper Switch	BV-202	BV-302	BV-402

Bravo. No Other PIR Even Comes Close

The reliability and performance of your security system can be greatly enhanced or impeded by your choice of motion detector. The key point to consider is this: if the alarm sounds on your system, has an intruder entered... or is it a false alarm? It's not something you want to be in doubt about, which is why Bravo has risen to become the

overwhelming choice of home and business owners worldwide.

Nothing can match a Bravo for its sensitivity, accuracy and built-in immunity to false alarms. Even lightning, static shocks and power surges are no match for Bravo's superior design. Simply put, Bravo is built to provide the highest

immunity to false alarms possible... without compromising catch in any way.

By ensuring significantly higher levels of accuracy and stability under all environmental and climatic conditions, Bravo PIRs offer precisely the level of security you're looking for. And to make extra sure, every

individual unit is functionally tested before leaving our factory.

By recommending Bravo, your dealer is clearly demonstrating his genuine concern for your safety and security. By choosing Bravo, you are joining hundreds of thousands of satisfied customers who wouldn't settle for anything less.
